## **FM Listening Systems** Guide

## FM Listening System Cables for Spectra & SPrint™ Body-Worn Speech Processors

Before selecting an FM cable, you need to know the manufacturer, receiver, and transmitting number for the FM system you want to connect to. If you have a Spectra you will also need to know your serial number. The FM cables listed in the compatibility guide function with SPrint and Spectra (serial numbers 340000 and above) speech processors. If your Spectra has a serial number below 340000, please select from the first 4 FM cables listed below. Use the chart on page 35 to help you identify the correct cable.

### FM Listening System Cables

## FM Listening System Cables for ESPrit™ & ESPrit™ 22 Ear Level Speech Processors

From this point forward, we will refer to both processors as ESPrit™.

The FM transmit cable, Z77088 may be of benefit in reducing interference and/or extending the range of all the listed FM systems. The FM transmit cable is recommended for users who cannot reliably report on sound quality, particularly young children. Some FM cables require the transmit cable. For those, the transmit cable is already included. The ESPrit™ 22 does not require the use of an FM transmitting cable.
